

Recommended Reading for Cortland Developers

This binder contains preliminary specifications for the Cortland system. Although the Cortland is in many respects a new system, it is based on Apple IIe and IIc hardware and software.

Much of the information presented here assumes a detailed knowledge of these systems. Technical information on Apple IIe and IIc hardware and software can be found in the publications listed below, all of which are available from Apple Computer.

If you haven't developed Apple II-compatible products before, or if you're generally unfamiliar with Apple II architecture or operating systems, take the time to read the material listed below for general background before you begin learning about the Cortland system.

Title

Apple IIe Reference Manual

About Your Enhanced Apple IIe: Programmer's Guide

Apple IIc Reference Manual

ProDOS Technical Reference Manual

BASIC Programming With ProDOS

Developer's Handbook for the Apple II MouseText Tool Kit

Apple Numerics Manual
