EDUCOMP ENTERPRISES

Proudly announces the first-ever public release of the award-winning educational computer program:

THE WORLD OF COUNTING

A computer program designed especially for the teaching of the learning disabled.

THE WORLD OF COUNTING

THE WORLD OF COUNTING is a micro-computer program especially designed to assist in the teaching of learning disabled students. Written for the Apple II+ computer, this program utilizes graphics, sound effects, and music to teach the beginning principles of counting.

Developed by Don K. Crowther a senior at Brigham Young University, this program has won national honors in an international search for products to aid the handicapped.

The World of Counting is designed for use with students in the 3 to 7 year old mental age group.

* Colorful graphics draw the student's attention and hold it!

* Sound effects and music are utilized for additional reinforcement and transistions.

* Extensive repetition and reinforcement is used throughout the program to provide the extra stimulus necessary in teaching the learning disabled.

* A special test is given at the end of the lesson to determine how much the student has actually learned.

* Student response time and score on the drill and practice exercises and the final test are automatically recorded for teacher use.

* This program is written in the "Apple "Pilot" language (a language created especially for educators), and can be easily customized by any teacher having access to that language.

* Simple instructions are provided -- No computer experience is necessary to operate!

* Proven teaching techniques are used to instruct the students in basic counting concepts and the numbers one to five.
