timeop

Calculates and displays arithmetic operations with durations.

Version 0.1.0 - 17/11/2024

Cédric Pierquet
c pierquet - at - outlook . fr
https://github.com/cpierquet/timeop

```
\simpletimeop{9,45,54}{4,28,57}{14,14,51}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min}\,54\,\text{s} \\ + & 4\,\text{h}\,28\,\text{min}\,57\,\text{s} \\ \hline & 14\,\text{h}\,14\,\text{min}\,51\,\text{s} \end{array}$$

```
\calctimeop%
  [type=-]%
  {9,45,54}%
  {9,28,57}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min}\,54\,\text{s} \\ - & 9\,\text{h}\,28\,\text{min}\,57\,\text{s} \\ \hline & 0\,\text{h}\,16\,\text{min}\,57\,\text{s} \end{array}$$

```
\calctimeop%
  [find={-,-,-,-,-,-,blue,yellow,red}]%
  {9,45,54}%
  {4,28,57}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min}\,54\,\text{s} \\ + & 4\,\text{h}\,28\,\text{min}\,57\,\text{s} \\ \hline & \square\,\text{h}\,\square\,\text{min}\,\square\,\text{s} \end{array}$$

Contents

1 History & Future

`0.1.0: Initial version`

2 Introduction

2.1 Loading, useful packages

In order to load `timeop`, simply use:

```
\usepackage{timeop}
```

Loaded packages are `xstring`, `xintexpr`, `listofitems`, `tabularray`, `simplekv` and `tcolorbox`.
Loaded libraries are `skins`.
If `amsmath` doen't need to be loaded (useful for int. macro), just add `[noamssymb]` to the loading.

```
%w/o amsmath loading
\usepackage[noamsmath]{timeop}
```

2.2 Special macro

Special macros are available, to mark a *finding number*, which is adapted to current font.

```
\boxhms{red} / \boxhms{yellow} / \boxhms{orange} / \boxhms{teal}
```

3 Usage

3.1 Conversion s–hms or hm(s)–s

First available macros can convert times within hms and s.

```
%convert hm to s
\hmtos{h,m}[\macro]
%convert hms to s
\hmstos{h,min,s}[\macro]
%convert and/or print s to hms
\stohms[keys]{s}[\macro]
```

Available keys are:

- `sys` : version of formatting system (`eu` by default);
- `zeros` : boolean for leading zeros (`true` by default);
- `raw` : boolean for storing raw result into `[\macro]` (`true` by default).

If `[raw=false]`, the code format the result within `hh h mm min ss s` main format (zero value are not printed).

```
\hmtos{1,45}\convtosec\\
\hmstos{9,45,54}\convtosec\\
\stohms{35154}\convtohms
```

6300
35154
9,45,54

```
\stohms[raw=false]{1000}\\
\stohms[raw=false]{36000}\\
\stohms[raw=false,zeros=false]{36120}\\
\stohms[raw=false]{36010}\\
\stohms[raw=false]{3599}\\
\stohms[raw=false,sys=en]{3599}
```

16 min 40 s
10 h
10 h 2 min
10 h 10 s
59 min 59 s
00:59:59

3.2 Addition, subtraction

The purpose of the second macro is to present addition or subtraction of duration, within *hms* format. Two methods are given:

- the *simple* way, with result given;
- the *compute* way, with result calculated.

```
%simple way
\simpletimeop[keys]{h1,m1,s1}{h2,m2,s2}{h3,m3,s3}

%compute way
\calctimeop[keys]{h1,m1,s1}{h2,m2,s2}
```

Available keys are:

- `zeros` : boolean for leading zeros (`false` by default);
- `type` : `+` for addition, `-` for subtraction `+` (`true` by default);
- `colsep` : length of `colsep` for columns (`1.5pt` by default);
- `find` : list of `colors` for 'finding boxes' (`empty` by default).

So:

- for the *simple way*, arguments can be given with `\boxhms` or integer values ;
- for the *compute way*, the code adapt result for hms or hm format, and `find` can be given with - fir ignoring finding items.

```
\simpletimeop{9,45,54}{4,28,57}{14,14,51}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min}\,54\,\text{s} \\ + & 4\,\text{h}\,28\,\text{min}\,57\,\text{s} \\ \hline & 14\,\text{h}\,14\,\text{min}\,51\,\text{s} \end{array}$$

```
\simpletimeop{9,45,54}{4,28,57}{\boxhms{red},\boxhms{blue},\boxhms{purple}}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min}\,54\,\text{s} \\ + & 4\,\text{h}\,28\,\text{min}\,57\,\text{s} \\ \hline & \square\,\text{h}\,\square\,\text{min}\,\square\,\text{s} \end{array}$$

```
\simpletimeop[type=-]{9,45}{4,28}{\boxhms{red},\boxhms{blue}}
```

$$\begin{array}{rr} & 9\,\text{h}\,45\,\text{min} \\ - & 4\,\text{h}\,28\,\text{min} \\ \hline & \square\,\text{h}\,\square\,\text{min} \end{array}$$

```
\calctimeop%
    [type=-]%
    {9,45,54}%
    {9,28,57}
```

$$\begin{array}{rr} & 9\ \text{h}\ 45\ \text{min}\ 54\ \text{s} \\ - & 9\ \text{h}\ 28\ \text{min}\ 57\ \text{s} \\ \hline & 0\ \text{h}\ 16\ \text{min}\ 57\ \text{s} \end{array}$$

```
\calctimeop%
    [find={blue,-,-,-,green,-,-,-,orange}]%
    {9,45,54}%
    {4,28,57}
```

$$\begin{array}{rr} & \square\ \text{h}\ 45\ \text{min}\ 54\ \text{s} \\ + & 4\ \text{h}\ \square\ \text{min}\ 57\ \text{s} \\ \hline & 14\ \text{h}\ 14\ \text{min}\ \square\ \text{s} \end{array}$$

```
{\LARGE\ttfamily\calctimeop[find={-,-,-,-,orange,teal},type=-,colsep=3pt]{9,45}{4,28}}
```

$$\begin{array}{rr} & 9\ \text{h}\ 45\ \text{min} \\ - & 4\ \text{h}\ 28\ \text{min} \\ \hline & \square\ \text{h}\ \square\ \text{min} \end{array}$$

4 The code
