82     frame-title-arg = false ,
83     mode = projector
84 }
85 \ProcessKeyOptions [ talk ]

```

1.6 Setting up

Load the font size setup if available, otherwise fall back on scaling.

```

86 \file_if_exist_input:nF { size \dim_to_decimal:n \l__talk_fontsize_dim .clo }
87 {
88     \file_input:n { size10.clo }

92 }

```

`\c__talk_paper_height_dim` `\c__talk_paper_width_dim` As geometry is being used to set the paper size with no previous value, we have to use the optional argument rather than waiting to apply `\geometry`.

```

125     { geometry }
126   }

```

(End of definition for `\c__talk_paper_height_dim` and `\c__talk_paper_width_dim`.)

Turn off justification

```

127 \raggedright

```

1.7 Math support

We always require `amsmath`: this is forced anyway by `unicode-math` for LuaTeX.

```

128 \RequirePackage { amsmath }

```

1.8 Font selection

The aim here is to minimize change from the standard font setup but at the same time provide a sans-serif default. Since `beamer` was released, better sans-serif math mode fonts have become available. For OpenType engines, requiring `unicode-math` is the most sensible approach. The New Computer Modern font provides a reasonable initial set of glyphs. It comes with a wrapper package, but that does various other things: if the user wants these, they can choose to load themselves. For 8-bit engines, switching the text font to be sans-serif is easy. For math mode, the `sansmathfonts` package does a good job: here, using the package rather than adjusting directly is the sensible option.

```

129 \sys_if_engine_opentype:TF
130 {
131   \RequirePackage { unicode-math }
132   \setsansfont { NewCMSans10-Regular.otf }
133   \setmathfont { NewCMSansMath-Regular.otf }
134 }
135 {
136   \RequirePackage { sansmathfonts }
137   \RequirePackage [ nomath ] { lmodern }
138 }
139 \cs_set_eq:NN \rmdefault \sfdefault

```

1.9 Hyperlinks

`\thepage` We define `\thepage` here: this is checked for by `hyperref` so has to come early.

```
140 \cs_new:Npn \thepage { \@arabic \c@page }
```

(End of definition for `\thepage`. This variable is documented on page ??.)

A requirement.

```
141 \RequirePackage { hyperref }
```

```
142 \hypersetup { hidelinks }
```

1.10 Tagging

We need to extend the standard tagging model to work with slides and so on.

```
143 \tagpdfsetup
```

```
144 {
```

```
145   role / user-NS = ltx-talk      ,
```

```
146   role / new-tag = frame / Sect  ,
```

```
147   role / new-tag = frametitle / H4
```

```
148 }
```

```
149 \</class>
```

Part II

ltx-talk-color – Color definitions

1 ltx-talk-color implementation

Start the DocStrip guards.

```
1 < *class >
    Identify the internal prefix.
2 < @@=talk >
```

The aim here is to *test* how well l3color can support the range of color functions that are needed for a presentation. As such, this is very much experimental, but deliberately so. In particular, there is an important question about the need for global colors: used throughout beamer but otherwise not widely encountered. At the same time, there is a need to work with packages that expect color to be managed in a predictable way: pgf in particular makes use of xcolor internal as part of color management.

Currently, colors defined using xcolor will be passed on to l3color provided \DocumentMetadata is active. As that is a requirement in any case for ltx-talk, some of the setup is relatively easy to do.

1.1 Existing definitions

```
3 \RequirePackage { xcolor }

\stdcolor Save the document commands.
\stdmathcolor 4 \NewCommandCopy \stdcolor \color
\stdtextcolor 5 \NewCommandCopy \stdmathcolor \mathcolor
6 \NewCommandCopy \stdtextcolor \textcolor
```

(End of definition for \stdcolor, \stdmathcolor, and \stdtextcolor. These functions are documented on page ??.)

1.2 Document commands

```
7 \cs_generate_variant:Nn \color_select:n { e }
8 \cs_generate_variant:Nn \color_select:nn { ne }
9 \cs_generate_variant:Nn \color_math:nn { e }
10 \cs_generate_variant:Nn \color_math:nnn { ne }

\color Add the overlay specification and use l3color.
\mathcolor
\textcolor
11 \RenewDocumentCommand \color { D <> { all } o m }
12 {
13     \__talk_if_overlay:nT {#1}
14     {
15         \IfNoValueTF {#2}
16         { \color_select:e {#3} }
17         { \color_select:ne {#2} {#3} }
18     }
19 }
20 \RenewDocumentCommand \mathcolor { D <> { all } o m +m }
21 {
22     \__talk_if_overlay:nT {#1}
```

```

23     {
24         \IfNoValueTF {#2}
25         { \color_math:en {#3} {#4} }
26         { \color_math:nen {#2} {#3} {#4} }
27     }
28 }
29 \RenewDocumentCommand \textcolor { D <> { all } o m +m }
30 {
31     \__talk_if_overlay:nT {#1}
32     {
33         \mode_leave_vertical:
34         \group_begin:
35         \IfNoValueTF {#2}
36         { \color_select:e {#3} }
37         { \color_select:ne {#2} {#3} }
38         #4
39         \group_end:
40     }
41 }

```

(End of definition for `\color`, `\mathcolor`, and `\textcolor`. These functions are documented on page ??.)

1.3 Color definition

`\DeclareColor` Provide a single interface here: as the data will be passed to `l3color` in any case, there is not too much to do.

```

42 \NewDocumentCommand \DeclareColor { m o m }
43 {
44     \IfNoValueTF {#2}
45     { \colorlet {#1} {#3} }
46     { \definecolor {#1} {#2} {#3} }
47 }

```

(End of definition for `\DeclareColor`. This function is documented on page ??.)

1.4 Semantic colors

Pick up the standard colors from beamer.

```

48 \DeclareColor { alert } [ RGB ] { 200 , 0 , 0 }
49 \DeclareColor { example } { green!50!black }
50 \DeclareColor { structure } [ rgb ] { 0.2 , 0.2 , 0.7 }
51 </class>

```

Part III

ltx-talk-decode – Decoding overlay specs

1 ltx-talk-decode implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.
2 <@@=talk>
```

`\l__talk_decode_overlays_bool` The result from decoding: are we on the current slide. This may well be better handled by moving to a TF signature: to be explored.

```
3 \bool_new:N \l__talk_decode_overlays_bool
```

(End of definition for \l__talk_decode_overlays_bool.)

`\g__talk_pauses_int` The automatically-incremented value for the relative overlay value.

```
\c@pauses 4 \int_new:N \g__talk_pauses_int
\thepauses 5 \cs_new_eq:NN \c@pauses \g__talk_pauses_int
6 \cs_new:Npn \thepauses { \@arabic \g__talk_pauses_int }
```

(End of definition for \g__talk_pauses_int, \c@pauses, and \thepauses. These variables are documented on page ??.)

`\l__talk_decode_pure_bool` Tracks whether only mode specifications were given.

```
7 \bool_new:N \l__talk_decode_pure_bool
```

(End of definition for \l__talk_decode_pure_bool.)

`\l__talk_decode_step_bool` Tracks whether to step `\g__talk_pauses_int`.

```
8 \bool_new:N \l__talk_decode_step_bool
```

(End of definition for \l__talk_decode_step_bool.)

`\l__talk_decode_arg_str` For error usage.

```
9 \str_new:N \l__talk_decode_arg_str
```

(End of definition for \l__talk_decode_arg_str.)

`\l__talk_decode_overlays_clist` The decoded overlay specification: will have only absolute slide numbers present, potentially along with ranges.

`\l__talk_decode_overlays_str`

```
10 \clist_new:N \l__talk_decode_overlays_clist
11 \str_new:N \l__talk_decode_overlays_str
```

(End of definition for \l__talk_decode_overlays_clist and \l__talk_decode_overlays_str.)

`\l__talk_decode_action_str` The action which is active, if any.

```
12 \str_new:N \l__talk_decode_action_str
```

(End of definition for \l__talk_decode_action_str.)

`\l__talk_decode_actions_bool` For the actions versions of overlay tracking.

`\l__talk_decode_actions_clist` 13 `\bool_new:N \l__talk_decode_actions_bool`

`\l__talk_decode_actions_str` 14 `\clist_new:N \l__talk_decode_actions_clist`

15 `\str_new:N \l__talk_decode_actions_str`

(End of definition for `\l__talk_decode_actions_bool`, `\l__talk_decode_actions_clist`, and `\l__talk_decode_actions_str`.)

`__talk_decode_parse:n` First a simple check for an entirely blank argument: if that's the case, there is no additional overlay to consider. Then deal with any category code issues before looping over

`__talk_decode_parse_aux:n` blocks divided by `|` tokens.

`__talk_decode_parse:w`

```

16 \cs_new_protected:Npn \__talk_decode_parse:n #1
17 {

31     }
32 }
33 \cs_new_protected:Npn \__talk_decode_parse_aux:n #1
34 { \__talk_decode_parse:w #1 | \q_recursion_tail | \q_recursion_stop }

```

The end-of-loop test here covers the case where the active mode is not mentioned at all in the specification.

```

35 \cs_new_protected:Npn \__talk_decode_parse:w #1 |
36 {
37   \quark_if_recursion_tail_stop_do:nn {#1}

46   \__talk_decode_parse:w
47 }

```

(End of definition for `__talk_decode_parse:n`, `__talk_decode_parse_aux:n`, and `__talk_decode_parse:w`.)

`\c__talk_modes_clist` The possible modes: detokenized as that is applied up-front in decoding.

```

48 \clist_const:Ne \c__talk_modes_clist
49 {
50   \tl_to_str:n { handout } ,
51   \tl_to_str:n { projector }
52 }

At this stage we have a fully “written out” overlay specification, and need to work out if the current slide is included. We need to look at each entry in the comma-separated list to sort this out. First we filter out the case of a *, then it’s a question of working out whether each entry is a single number or a range, and if the latter, whether it’s open at either the start or the end.

ltx-talk-frame – The structure of frames

1 ltx-talk-frame implementation

Start the DocStrip guards.

```
1 <{*class}>
    Identify the internal prefix.
2 <{@@=talk}>
```

1.1 Slides in frames

Currently, each slide in a frame will produce a separate page in the output (unless the slide is suppressed entirely). Material is then hidden on some pages by using opacity. An alternative approach would be to use Optional Content Groups to have a similar effect on one page per frame. However, whilst that would be relatively clear for appear/disappear effects, it would be much less straight-forward for partial transparency, *etc.*, plus would depend more heavily on viewer support. At a future stage we may wish to revisit this.

`\g__talk_slide_continue_bool` Tracks whether the frame continues after the current slide.

```
3 \bool_new:N \g__talk_slide_continue_bool
```

(End of definition for `\g__talk_slide_continue_bool`.)

`\l__talk_slide_box`

```
4 \box_new:N \l__talk_slide_box
```

(End of definition for `\l__talk_slide_box`.)

`\g__talk_slide_int`

The slide number inside the current frame: needed to know which overlays are active.

`\c@slide`

We also provide L^AT_EX counter-style access.

`\theslide`

```
5 \int_new:N \g__talk_slide_int
6 \cs_new_eq:NN \c@slide \g__talk_slide_int
7 \cs_new:Npn \theslide { \@arabic \c@slide }
```

(End of definition for `\g__talk_slide_int`, `\c@slide`, and `\theslide`. These variables are documented on page ??.)

Required to know which is the last slide in a frame for tagging.

```
8 \property_new:nnnn { slides } { now } { 1 } { \int_use:N \g__talk_slide_int }
```

`__talk_slide:nn`
`__talk_slide_aux:n`

Each slide is parsed inside simple set up, the only complexity being if we are handling fragile frames. There, all `\obeyedline` in the grabbed tokens need to be turned back into `^M` before rescanning: this ensures that any verbatim grabbing in the frame still works. The strange business with setting the continuation boolean is needed as otherwise we get an infinite loop if there is an overlay specification for the frame itself. Tagging should not of itself force slide continuation, so the global boolean is reset for the tagged slide.

\g__talk_frame_tag_bool To track when a frame is being tagged: mainly needed for the header (and as a result global).

\g__talk_frame_int The overall frame number, including L^AT_EX counter-like access.

ltx-talk-mode – Modes

1 ltx-talk-mode implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.

```

`__talk_mode:nT` A simplified version of `\mode`: only deal with the argument form, only check the entire overlay spec as a string.

```
3 \prg_new_protected_conditional:Npnn \__talk_mode:n #1 { T }
4 {
5     \bool_lazy_or:nnTF

ltx-talk-overlay — Overlays

1 ltx-talk-overlay implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.
2 <@@=talk>
```

1.1 Utilities

```
__talk_if_overlay:nTF
__talk_if_overlay:VTF
__talk_overlay_arg:n
3 \prg_new_protected_conditional:Npnn __talk_if_overlay:n #1 { T , F , TF }

8   \prg_return_false:
9 }
10 \prg_generate_conditional_variant:Nnn __talk_if_overlay:n { V } { T , F , TF }
```

A macro processor variant of the check that always results in an N-type bool.

```
11 \cs_new_protected:Npn __talk_overlay_arg:n #1
12 {
13   __talk_if_overlay:nTF {#1}
14   { \cs_set:Npn \ProcessedArgument { \c_true_bool } }
15   { \cs_set:Npn \ProcessedArgument { \c_false_bool } }
16 }
```

(End of definition for __talk_if_overlay:nTF and __talk_overlay_arg:n.)

1.2 Action commands and environments

Commands that can be used as actions all have a common form (with one exception). The common internal structure is used to enable them to be used as actions by looking for the name `__talk_action_⟨name⟩:N`. This is set up such that the inactive versions insert a whatsit equal to that which would be present if they were active: that's needed for spacing.

```
__talk_action_:N The fallback action.
17 \cs_new_protected:Npn __talk_action_:N #1 { }
```

(End of definition for __talk_action_:N.)

```
__talk_action_alert:N At present a color selection.
18 \cs_new_protected:Npn __talk_action_alert:N #1
19 {
20   \bool_if:NTF #1
21   { \color_select:n { alert } }
22   { \color_select:n { . } }
23 }
```

(End of definition for `__talk_action_alert:N`.)

`__talk_action_invisible:N`
`__talk_action_visible:N`

Simply hide unconditionally.

```

24 \cs_new_protected:Npn \__talk_action_invisible:N #1
25 {
26   \bool_if:NTF #1
27     { \opacity_select:n { 0 } }
28     { \opacity_select:n { 1 } }
29 }
30 \cs_new_protected:Npn \__talk_action_visible:N #1
31 {
32   \bool_if:NTF #1
33     { \opacity_select:n { 1 } }
34     { \opacity_select:n { 0 } }
35 }

```

(End of definition for `__talk_action_invisible:N` and `__talk_action_visible:N`.)

`__talk_action_only_begin:N`
`__talk_action_only_end:N`

Here, we simply throw away the content we do not want: this is done by typesetting in a disposable box.

```

36 \cs_new_protected:Npn \__talk_action_only:N #1
37 {
38   \bool_if:NF #1
39     { \vbox_set:Nw \l__talk_tmp_box }
40 }
41 \cs_new_protected:Npn \__talk_action_only_end:N #1
42 {
43   \bool_if:NF #1
44     { \vbox_set_end: }
45 }

```

(End of definition for `__talk_action_only_begin:N` and `__talk_action_only_end:N`.)

`\l__talk_uncover_hidden_fp`

Currently just an on-off, but that will change.

```

46 \NewTemplateType { hidden } { 0 }
47 \DeclareTemplateInterface { hidden } { talk } { 0 }
48   { opacity : real = 0 }
49 \DeclareTemplateCode { hidden } { talk } { 0 }
50   { opacity = \l__talk_uncover_hidden_fp }
51   { \opacity_select:n { \l__talk_uncover_hidden_fp } }
52 \DeclareInstance { hidden } { std } { talk } { }

```

(End of definition for `\l__talk_uncover_hidden_fp`.)

`__talk_action_uncover:N`

Use the template

```

53 \cs_new_protected:Npn \__talk_action_uncover:N #1
54 {
55   \bool_if:NTF #1
56     { \opacity_select:n { 1 } }
57     { \UseInstance { hidden } { std } }
58 }

```

(End of definition for `__talk_action_uncover:N`.)

`\only` Commands and environments where the payload applies when the material is not active on the slide.

```

68       { \exp_not:c { __talk_action_ #1 _end:N } ##1 }
69       \group_end:
70     }
```

(End of definition for \only, \invisible, and \uncover. These functions are documented on page ??.)

```

76   { \exp_not:c { __talk_action_ #1 _end:N } ##1 }
77 }
78 }
```

`\alert` And those where the action applies when we are on the slide.

```
\visible
79 \clist_map_inline:nn { alert , visible }
80 {
81   \ExpandArgs { cne } \NewDocumentCommand {#1}
82     { > { \__talk_overlay_arg:n } D <> { all } +m }
83     {
84       \group_begin:
85       \exp_not:c { __talk_action_ #1 :N } ##1
86       ##2
87       \group_end:
88     }
```

(End of definition for \alert and \visible. These functions are documented on page ??.)

```

91 { \exp_not:c { __talk_action_ #1 :N } ##1 }
92 { }
93 }
```

`\only` This code needs to be done manually as for the command version the content must be entirely discarded. That can't work for the environment version, which has to deal with for example single items in a list (and so cannot be collected up verbatim and must use a box).

```
94 \RenewDocumentCommand \only { D <> { all } +m }

actionenv

As we need data on not just overlays but also actions at the end of the environment, this has to be done manually. To allow working with environments but also items, the code needs to save data for the end function. The group is needed for cases where we are not in a L^AT_EX environment group.

1.3 Non-action commands and environments

This section contains commands and environments that do *not* need to be made available as actions.

\alt Simple wrappers around the internal switch.

```

141 \NewDocumentCommand \alt { D <> { all } +m +m }
142 {
143   \_talk\_if\_overlay:nTF {#1}
144     {#2}
145     {#3}
146 }

```

(End of definition for \alt. This function is documented on page ??.)

\onslide Simply make transparent: we will likely need to save the original opacity level. To allow us to apply independent of group level, a little work is needed.

```

\__talk\_onslide:n
\__talk\_onslide\_reset:
147 \NewDocumentCommand \onslide { D <> { all } }
148 { \__talk\_onslide:n {#1} }
149 \cs_new_protected:Npn \__talk\_onslide:n #1
150 {
151   \tl\_use:N \g\_talk\_onslide\_tl

157         {
158           \opacity\_select:n { 0 }
159           \group\_insert\_after:N \g\_talk\_onslide\_escape\_tl
160         }
161       \group\_insert\_after:N \g\_talk\_onslide\_escape\_tl
162       \tl\_gset:Nn \g\_talk\_onslide\_tl
163         {
164           \tl\_gclear:N \g\_talk\_onslide\_tl
165           \tl\_gclear:N \g\_talk\_onslide\_escape\_tl
166           \__talk\_onslide\_reset:
167         }
168     }
169 }
170 \cs_new_protected:Npn \__talk\_onslide\_reset: { \opacity\_select:n { 1 } }

```

```

\g\_talk\_onslide\_escape\_tl

172 \tl\_new:N \g\_talk\_onslide\_escape\_tl

```

(End of definition for `\g__talk_onslide_tl` and `\g__talk_onslide_escape_tl`.)

`\temporal` A tricky one: to separate the not-on-current-slide cases, the flag to continue is used.

```

173 \NewDocumentCommand \temporal { D <> { all } +m +m +m }
174 {
175   \__talk_if_overlay:nTF {#1}
176     {#3}
177     {
178       \bool_if:NTF \g__talk_slide_continue_bool
179         {#4}
180         {#2}
181     }
182 }

```

(End of definition for `\temporal`. This function is documented on page ??.)

`\pause` A thin wrapper.

```

183 \NewDocumentCommand \pause { o }
184 {
185   \IfNoValueTF {#1}
186     { \int_gincr:N \g__talk_pauses_int }

189 }

```

(End of definition for `\pause`. This function is documented on page ??.)

1.4 Fixed-size areas

`__talk_overprint_begin:n` A common auxiliary for overprinting, which starts off much the same for both `overlayarea` and `overprint`.

```

190 \cs_new_protected:Npn \__talk_overprint_begin:n #1
191 {
192   \par
193   \vbox_set_to_wd:Nnw \l__talk_tmp_box {#1}
194   \raggedright
195   \ignorespaces
196 }

```

(End of definition for `__talk_overprint_begin:n`.)

`overlayarea (env.)` An initial approach: quite similar to a column.

```

197 \NewDocumentEnvironment { overlayarea } { m m }
198 { \__talk_overprint_begin:n {#1} }
199 {
200   \vbox_set_end:
201   \vbox_to_ht:nn {#2}
202   {
203     \box_use_drop:N \l__talk_tmp_box
204     \vfil
205   }
206   \par
207 }

```

`\l__talk_overprint_int` Track the overprints on a slide: as the slide forms a group, we do not need to worry about resetting.

```
208 \int_new:N \l__talk_overprint_int
```

(End of definition for `\l__talk_overprint_int`.)

`__talk_frame_overprint:` To refer to the current overprint environment within the document: needed in the `.aux` so avoids using non-letters.

```
209 \cs_new:Npn \__talk_frame_overprint:
```

```
210 {
```

```
211   \int_to_Roman:n \g__talk_frame_int
```

```
212   \int_to_roman:n \l__talk_overprint_int
```

```
213 }
```

(End of definition for `__talk_frame_overprint:`.)

`__talk_overprint_int` For overprinting, in contrast to `beamer` we use a two-pass approach to save the size at the end of the run: this means you can use `\only` for example in overprinting.

```
214 \NewDocumentEnvironment { overprint } { 0 { \textwidth } }
```

```
215 { \__talk_overprint_begin:n {#1} }
```

```
216 {
```

```
217   \vbox_set_end:
```

```
218   \int_incr:N \l__talk_overprint_int
```

```
219   \__talk_overprint_save_ht:
```

```
220   \cs_if_exist:cTF
```

```
221     { overprint@ \__talk_frame_overprint: } 
```

```
222     {
```

```
223       \dim_compare:vNnTF
```

```
224         { overprint@ \__talk_frame_overprint: } 
```

```
225         > { \box_ht:N \l__talk_tmp_box } 
```

```
226         {
```

```
227           \vbox_to_ht:vn
```

```
228             { overprint@ \__talk_frame_overprint: } 
```

```
229             {
```

```
230               \box_use_drop:N \l__talk_tmp_box
```

```
231               \vfil
```

```
232             }
```

```
233           }
```

```
234           { \box_use_drop:N \l__talk_tmp_box } 
```

```
235         }
```

```
236         { \box_use_drop:N \l__talk_tmp_box } 
```

```
237     \par
```

```
238 }
```

As there is no clear end-point for overprinting, we need to be careful to keep the current width separate from the saved one. The rest is then about saving to the `.aux` file and helping out the user.

1.5 Adding overlays to existing commands

Make the standard text commands overlay-aware. To keep the spacing unchanged when the command is not active, we use the same approach as the kernel does for inserting the right grouping.

Here we collect up things that are more-or-less required to create a useful class but are not defined by the L^AT_EX kernel for historical reasons. They are therefore largely copies from `article.cls` and contain “classical” definitions so that they follow the expectations of third-party code.

(End of definition for `\l__talk_section_tl` and others.)

<code>\section</code>	Here, we need full L ^A T _E X counters, so create them using the appropriate mechanism: that
<code>\subsection</code>	also means we can sort out counter dependency and the appearance (using the same setup
<code>\subsubsection</code>	
<code>\thesection</code>	
<code>\thesubsection</code>	
<code>\thesubsubsection</code>	

as in article). As (subsub)section numbers never increment inside frames, we remove these counters from the general tracker.

```

\section \subsection \subsubsection \insertsection \insertsubsection \insertsubsubsection	The sectioning commands all have essentially the same form: we therefore create using a generator with the necessary conditionals in place. As we do not typeset sections at this stage, the code is quite different from article. This also means that the bookmark links need to point forward to the next slide: if that doesn't appear, the bookmarks will be out. Using the general scratch sequence here should be OK: t really is a one-off setting. We need a sequence to allow indexed mapping to avoid any extra setup for the depth value.

1.3 Table of contents

`\@starttoc` The standard kernel implementation here deliberately overwrites the file as soon as it's read. That's no good for us as the table of contents can be read multiple times. So we modify the code: we start from the tagging-aware version (this may need to be revisited). We retain the $\text{\LaTeX} 2_{\epsilon}$ code as much as possible.

```

135 \cs_gset_protected:Npn \@starttoc #1

148         }
149     }
150     \nobreakfalse

1.5 Lists

`\item` Again, add the additional argument: here, we have to do a little gymnastics. The test for an overlay has to come after the standard item definition: in a list, items have to *close* the structure before them first, so if we test too early, we'd end up covering then uncovering straight away!

```

271 \AddToHook { begindocument / before }
272 {
273     \NewCommandCopy \stditem \item
274     \RenewDocumentCommand \item { d <> = { label } o }

277         { \stditem }
278         { \stditem [ {#2} ] }
279     \IfNoValueTF {#1}
280     {
281         \exp_after:wN \__talk_item_parse_spec:w
282         \l__talk_action_spec_str < all > \q_stop
283     }
284     { \__talk_item_parse_spec:n {#1} }
285 }
286 }

```

Parsing the spec is a separate function here as there are a couple of routes to get here. At present we only have a `false` branch, but for spacing we likely will need to add something to the `true` branch too. The odd stuff with `\currentgrouplevel` here is needed so we only close the item at the correct nesting, allowing for the group that gets added.
